EDUCATION

University of the Philippines – Diliman

BS Electronics Engineering
2019 – 2022, 2024 – 2025
GWA: 1.1988 (Summa Cum Laude)

ABOUT

I got amazed when I first learned how to code. Later on, I got the hang of frontend development and gained solid professional experience in the field. I easily picked up no-code and low-code tools like Webflow and it has been a top choice by clients who want highly maintainable and scalable websites.

WORK EXPERIENCE

Freelance, White Label (2024 –)
- I translate Figma designs to **maintainable and scalable** Webflow websites.
- As an experienced programmer, I am well-versed in writing **custom JS and CSS** as necessary.

Website Developer @ ShortPoint (January 2023 – February 2024)
- I worked in a two-man team to maintain our company marketing site and other subdomains using Webflow.
- I created custom code for new features, bug fixes, and site optimization mainly with JS, CSS, and HTML.
- I optimized our site speed – went **up by 50 points** on PageSpeed Insights and **reached 90+** Pingdom scores on major pages.
- I **implemented** our site on a **new stack** (AstroJS, Tailwind, and AlpineJS) for upcoming site migration.

Frontend Web Developer @ Sonnet (September 2022 – January 2023)
- I built and maintained WordPress websites for different clients, on an assignment basis.
- I implemented custom themes in WordPress with PHP, SCSS, jQuery, and Advanced Custom Fields plugin.

PROJECTS

WindFlow (link) (deployed and maintained: 2024 -)
- Made with React, Tailwind, and Webflow's Designer API.
- A plugin for Webflow, used to add Tailwind utility classnames to Webflow elements.
- Aims to solve Webflow developers' combo class problems and lack of utility and global class support.
